Mild Traumatic Brain Injury in Children and Adolescents Feb 05 2021 A cutting-edge synthesis of science and practice, this book covers everything from sports-related concussions to less common types of mild traumatic brain injury (mTBI) and related complications. Preeminent authorities review what is known about mTBI in childhood and adolescence?including biomechanics,

pathophysiology, and neurological and neurobehavioral outcomes?and showcase evidence-based clinical evaluation tools and management strategies. Challenging areas such as evaluating complicated mTBI and treating persistent problems after injury are discussed in detail. Also addressed are forensic issues, injury in very early childhood, and other special-interest topics. The Invisible Brain Injury Oct 01 2020

The Invisible Brain Injury recounts, in her own words, the experience of Aurora Lassaletta, a clinical psychologist who suffered a traumatic brain injury (TBI) after a traffic accident. Presenting her unique dual perspective as both a patient and a clinician, Aurora highlights the less visible cognitive, emotional and behavioural symptoms common to acquired brain injury (ABI). This moving account showcases Aurora's growing awareness

of her impairments, their manifestation in daily life, how they are perceived, or not, by others and the tools that helped her survive. Each chapter combines Aurora's perspective with the scientific view of a professional neuropsychologist or psychiatrist who provide commentaries on her various symptoms. This book is valuable reading for professionals involved in neurorehabilitation and clinical neuropsychology and for clinical psychology students. It is a must read for ABI survivors, those around them and clinicians, who are all an essential part of the

rehabilitation, adjustment and acceptance process involved with ABI. Translational Research in Traumatic Brain Injury Feb 17 2022 Traumatic brain injury (TBI) remains a significant source of death and permanent disability, contributing to nearly one-third of all injury related deaths in the United States and exacting a profound personal and economic toll. Despite the increased resources that have recently been brought to bear to improve our understanding of TBI, the development of new diagnostic and therapeutic approaches has been

disappointingly slow. Translational Research in Traumatic Brain Injury attempts to integrate expertise from across specialties to address knowledge gaps in the field of TBI. Its chapters cover a wide scope of TBI research in five broad areas: Epidemiology Pathophysiology Diagnosis Current treatment strategies and sequelae Future therapies Specific topics discussed include the societal impact of TBI in both the civilian and military populations, neurobiology and molecular mechanisms of axonal and neuronal injury, biomarkers of traumatic brain injury

injury and their relationship to pathology, neuroplasticity after TBI, neuroprotective and neurorestorative therapy, advanced neuroimaging of mild TBI, neurocognitive and psychiatric symptoms following mild TBI, sports-related TBI, epilepsy and PTSD following TBI, and more. The book integrates the perspectives of experts across disciplines to assist in the translation of new ideas to clinical practice and ultimately to improve the care of the brain injured patient.

widespread condition. *Head Cases* May 2022 *Head Cases* takes us into the dark side of the brain in an astonishing sequence of stories, at once true and strange, from the world of brain damage. Michael Paul Mason is one of an elite group of experts who coordinate care in the complicated aftermath of tragic injuries that can last a lifetime. On the road with Mason, we encounter survivors of brain injuries as they struggle to map and make sense of the new worlds they inhabit. Underlying each of these survivors' stories is an exploration of the brain and its

mysteries. When injured, the brain must figure out how to heal itself, reorganizing its physiology in order to do the job. Mason gives us a series of vivid glimpses into brain science, the last frontier of medicine, and we come away in awe of the miracles of the brain's workings and astonished at the fragility of the brain and the sense of self, life, and order that resides there. *Head Cases* "[achieves] through sympathy and curiosity insight like that which pulses through genuine literature" (The New York Sun); it is at once illuminating and deeply affecting.

Brain Mar 18 2022
Useful information and real hope for patients and families whose lives have been altered by traumatic brain injury. A traumatic brain injury is a life-changing event, affecting an individual's lifestyle, ability to work, relationships—even personality. Whatever caused it—car crash, work accident, sports injury, domestic violence, combat—a severe blow to the head results in acute and, often, lasting symptoms. People with brain injury benefit from understanding, patience, and assistance in recovering their bearings and functioning to their full abilities. In *The*

Traumatized Brain, neuropsychiatrists Drs. Vani Rao and Sandeep Vaishnavi—experts in helping people heal after head trauma—explain how traumatic brain injury, whether mild, moderate, or severe, affects the brain. They advise readers on how emotional symptoms such as depression, anxiety, mania, and apathy can be treated; how behavioral symptoms such as psychosis, aggression, impulsivity, and sleep disturbances can be addressed; and how cognitive functions like attention, memory, executive functioning, and language can be improved. They also

discuss headaches, seizures, vision problems, and other neurological symptoms of traumatic brain injury. By stressing that symptoms are real and are directly related to the trauma, Rao and Vaishnavi hope to restore dignity to people with traumatic brain injury and encourage them to ask for help. Each chapter incorporates case studies and suggestions for appropriate medications, counseling, and other treatments and ends with targeted tips for coping. The book also includes a useful glossary, a list of resources, and suggestions for further reading.

Mild Traumatic Brain Injury and Postconcussion Syndrome Jun 21 2022

This is the first neuropsychology book to translate exciting findings from the recent explosion of

research on sport-related concussion to the broader context of mild traumatic brain injury (MTBI) and post-concussive syndrome (PCS) in the general population. In addition, it includes a Continuing Education (CE) component administered by the American Academy of Clinical Neuropsychology. Traumatic brain injuries constitute a major global public health problem, but until now, MTBIs, which constitute up to 90 percent of all treated TBIs, have been difficult to evaluate and manage clinically because of the absence of a viable model. Dr. McCrea's book thus provides a welcome

evidence base for all clinicians - including psychologists, neuropsychologists, neurologists, neurosurgeons, rehabilitation medicine physicians, psychiatrists, and nurses - involved in the clinical diagnosis and treatment of MTBI, as well as attorneys involved in personal injury litigation and personal injury defense. Each section of the book ends with a helpful summary of the 'Top 10 Conclusions.' Lost in My Mind is a stunning memoir describing

Kelly Bouldin Darmofal's journey from adolescent girl to special education teacher, wife and mother -- despite severe Traumatic Brain Injury (TBI). Spanning three decades, Kelly's journey is unique in its focus on TBI education in America (or lack thereof). Kelly also abridges her mother's journals to describe forgotten experiences. She continues the narrative in her own humorous, poetic voice, describing a victim's relentless search for success, love, and acceptance -- while combating bureaucratic red tape, aphasia, bilateral hand impairment, and loss of memory.

Readers will: Learn why TBI is a "silent illness" for students as well as soldiers and athletes. Discover coping strategies which enable TBI survivors to hope and achieve. Experience what it's like to be a caregiver for someone with TBI. Realize that the majority of teachers are sadly unprepared to teach victims of TBI. Find out how relearning ordinary tasks, like walking, writing, and driving require intense determination.
