An A From Miss Keller Dec 14 2020 How did Patricia Polacco become a writer? A perfect companion to the classic Thank You, Mr. Falker, The Art of Miss Chew, and Mr. Wayne's Masterpiece, this book celebrates a teacher who inspired a young Patricia Polacco to become the writer and storyteller she is today. Trisha is nervous about being chosen for Miss Keller's writing class. "Killer Keller" demands that her students dazzle her with their writing, and rumor has it that she has never given an A. The rumors turn out to be all too true—there's just no pleasing Miss Keller. Then an unexpected loss leaves Trisha heartbroken. Thoughts of teachers and grades forgotten, she pours out her soul in a personal narrative. And when Miss Keller reads it, she tells Trisha, "You've given your words wings."

The Powers Metaphysic Apr 17 2021 Systematic metaphysics is defined by its task of solving metaphysical problems through the repeated application of single, fundamental ontology. The dominant contemporary metaphysic is that of neo-Humeanism, built on a static ontology typified by its rejection of basic causal and modal features. This book offers a radically distinct metaphysic, one that turns the status quo on its head. Starting with a foundational ontology of inherently causal properties known as "powers", Neil E. Williams develops a metaphysic that appeals to powers in explanations of causation, persistence, laws, and modality. Powers are properties that have their causal natures internal to them: they are responsible for the effects in the world. A unique account of powers is advanced, one that understands this internal nature in terms of blueprint of potential interaction types. After the presentation of the powers ontology, Williams offers solutions to broad metaphysical puzzles, some of which take on different forms in light of the new tools that are available. The defence of the ontology comes from the virtues of metaphysic it can be used to develop. Particular attention is paid to the problems of causation and persistence, simultaneously solving them as it casts them in a new light. The resultant powers metaphysic is offered as a systematic alternative to neo-Humeanism.

Assessment Rubrics Decoded May 19 2021 Rubrics offer concrete artefacts of what schools evaluate to be of merit, and what educators and schools value to be worth rewarding. Assessment Rubrics Decoded offers insights into a myriad of issues that affect, and are affected by, the construction of merit in students' learning and the articulation of (underlying) educational ideologies in the assessment of student achievement. Designed for both students and teachers – who should have parity of involvement in developing and using rubrics – this book covers the problematic issues of assessment in schools while offering readers practical solutions to navigating the ensuing tensions and dilemmas. The notion that rubrics may hinder assessment transparency is also discussed, with examples, to warn against uncritical use of rubrics that may discipline rather than help learners. The perspective of a school leader in providing assessment leadership to rubrics usage across a school is included for extending awareness of rubrics beyond classroom contexts. This provides an informed approach for teachers to understand the stakes and complexities involved in judging learning, and learners, whilst offering concrete options and suggestions to consider. This book will be a valuable resource for classroom teachers, school leaders, teacher educators and researchers interested in the field of assessment rubrics.

Ethics in Qualitative Research Jan 15 2021 All social researchers need to think about ethical issues. Their salience has recently been increased by the pressures of ethical regulation, particularly in the case of qualitative research. But what are ethical issues? And how should they be approached? These are not matters about which there is agreement. Ethics in Qualitative Research explores conflicting philosophical assumptions, the diverse social contexts in which ethical problems arise, and the complexities of handling them in practice. The authors argue that the starting point for any discussion of research ethics must be the values intrinsic to research, above all the commitment to knowledge-production. However, the pursuit of inquiry is rightly constrained by external values, and the book focuses on three of these: minimising harm, respecting autonomy, and protecting privacy. These external values are shown to be far from unequivocal in character, often in conflict with one another (or with the commitments of research), and always subject to situational interpretation and practical judgment. Nevertheless, it is contended that in the present challenging times it is essential that qualitative researchers uphold research values. Martyn Hammersley is Professor of Educational and Social Research at The Open University. Anna Traianou is Senior Lecturer in the Department of Educational Studies, Goldsmiths, University of London.

The Knowledge Gap Dec 02 2019 The untold story of the root cause of America's education crisis—and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system—one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong—it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

Pacific Rim Objective Measurement Symposium (PROMS) 2012 Conference Proceeding Jun 07 2020 Entrusted by the Board of Management of the Pacific Rim Objective Measurement Symposium (PROMS), PROMS2012 is held in Jiaxing, China from August 6-9, 2012. Over the past years, PROMS has been hosted in many parts of the Pacific Rim, in Singapore, Malaysia, Hong Kong, Taiwan and Tokyo, which has greatly promoted the research of and contributed to the development of Rasch Model in one way or another. As early as in 1980s, the ideas and concepts regarding IRT was first introduced into China by Prof. Gui Shichun, my Ph.D supervisor, and it is Prof. Gui who first conducted with great success the ten-year long (1990-1999) Equating Project for Matriculation English Test (MET) in China. MET is the most influential entrance examination for higher education administered annually to over 3.3 million candidates then. The Equating Project won recognition by Charles Alderson and other foreign counterparts during 1990s. Academically, those were Good Old Days for Chinese testing experts and psychometricians. Then for certain reasons, the equating practice abruptly discontinued. Therefore, in China nowadays, the application of IRT-based software like BILOG, Parscale, Iteman 4 and others to real testing problem solving is confined to an extremely small 'band' of people. In this sense, PROMS2012 meets an important need in that it provides an excellent introduction of IRT and its application. And anyone who is seriously interested in research and development in the field of psychometrics or language testing will find such a symposium and related workshops to be an excellent source of information about the application of Rasch Model. PROMS2012 focuses on recent advances in objective measurement and provides an international

forum on both the latest research in using Rasch measurement and non-Rasch practice.

Using Rubrics for Performance-Based Assessment Jan 27 2022 Writing a rubric that can accurately evaluate student work can be tricky. Rather than a single right or wrong answer, rubrics leave room for interpretation and thus subjectivity. How does a teacher who wants to use performance-based assessment in this day and age of educational data and SMART goals find a way to reliably assess student work? The solution is to write clear rubrics that allow the evaluator to objectively assess student work. This book will show classroom teachers not only how to create their own objective rubrics, which can be used to evaluate performance assessments, but also how to develop rubrics that measure hard-to-assess skills, such as leadership and grit, and how to empower their own students to create rubrics that are tailored to their work.
