[Automotive Machining](#) Nov 21 2021 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now.

Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.

[The Olivet Discourse Decoded](#) Jun 24 2019 Matthew records that Messiah pointed to "this generation" ten times. In the final time, Messiah said, "Verily I say unto you, this generation shall not pass, till all these things be fulfilled." Matthew 24:34 The nine previous mentions are pointing to the Jews who opposed Messiah. Are we to believe that the tenth time that He described "this generation," that He is pointing to the end times? No !The context of Messiah's Olivet Discourse is the desolation of the temple that He was just in when He rebuked the Jews and said, "Verily I say

unto you, all these things shall come upon this generation." All of the things that Messiah described from Matthew 23:36 to Matthew 24:33 were fulfilled by 70 AD when the Romans desolated Jerusalem, the temple, and the Jewish nation. The enemy has deceived people about the symbolism of the sun, moon, and stars being darkened; Messiah coming in power and glory; and the elect being gathered into the kingdom. But the Bible gives the proper definitions for the symbols. We need to take Messiah at His Word and look at how the things that He described were about the Jewish nation, for their punishment of continuing their rebellion against the Father, for delivering Messiah up to be killed, and for persecuting His disciples. The Olivet Discourse is directed related to the 70th Week of Daniel 9, which I cover in my previous book, which says that the city and temple will be desolated because of the abominations of the Jews. If you're seeking for truth, and not to defend a belief, this book will prove out the fulfillment of Messiah's Olivet Discourse. It will help you see that it's not about the end times so that you're not misled about the fulfillment of Revelation, as we await Messiah's promised return.

**[T]axing Greenhouse Gases** Aug 26 2019 Lex Fullarton takes a closer look at the three pillars of the sustainable development framework known as the Triple Bottom Line (TBL). The concept of the TBL is that for a project to be sustainable it must not simply be profitable in economic terms, but it must also benefit society and enhance the natural environment. In the 21st century, the greatest threat to Earth's natural environment and the population of the planet is the rise of greenhouse gas emissions caused from burning fossil fuel as an energy source. The rise of GHG emissions has resulted in a rise in the ambient air temperature of the Earth's atmosphere and is resulting in a significant change in climatic conditions on Earth. Fullarton scrutinizes the problem of getting industry and governments to understand the significance of creating harmony within the TBL. One of the main problems is that partisan politics tends to fragment the factors of the TBL rather than bring them together. Fullarton takes a strong stand in suggesting that taxation systems, which have traditionally been viewed primarily as a means of raising government finance, can be effectively applied to influence industrial and consumer attitudes towards transiting away from polluting fossil-fuel energy sources towards non-polluting renewable energy use.
