Intensive and Critical Care Medicine May 04 2020 The World Federation of Societies of Intensive and Critical Care Medicine (WFSIC-CM) has reached the age of maturity. Physicians, nurses, and many others associated with the field of Intensive and Critical Care Medicine will be coming from all corners of the world to Florence, Italy in August, 2009 to celebrate the 10th quadrennial congress. Every 4 years for the last 36 years, congresses in the magnificent venues of London (1973), Paris (1977), Washington (1981), Jerusalem (1985), Kyoto (1989), Madrid (1993), Ottawa (1997), Sydney (2001), and Buenos Aires (2005) have signified an ever-developing process which has resulted in the four pillars of the field of Intensive and Critical Care Medicine, namely partnership, ethics, professionalism, and competence. The first pillar is based on a stronger interdisciplinary collaboration and a multi-professional partnership in the field of Intensive and Critical Care Medicine. In recent decades, professional activity in medicine has been regulated by well-defined, universal principles, such as the welfare of the patient, autonomy, social justice, and the patient-physician relationship. The second pillar, ethics, has offered welcomed assistance to all these principles in establishing an ethics curriculum.

Patterns Of Change In Developing Rural Regions Aug 07 2020 Development specialists often overlook the fact that the towns of a rural region play an essential role in the region's economy as does agriculture, and they design and implement broad strategies without due recognition of the unique and dynamic character of each individual region. Proper analysis requires consideration of the changing nature of rural regions and the principal agents of change. The contributors to this volume argue that development strategists should focus on processes rather than on products by taking the nonfarm aspects, as well as the farm aspects, of rural development into account and by recognizing that land, labor, water, and technology do not alone lead to balanced regional and agricultural development. The analytical approaches presented in this book incorporate wide-ranging variables from the urban space of rural regions—markets, towns, service industries, and organizations—that have major impacts on the rural regional economy. These methodologies aim at improving rural regional development processes.

Curative Violence Feb 10 2021 In Curative Violence Eunjung Kim examines what the social and material investment in curing illnesses and disabilities tells us about the relationship between disability and Korean nationalism. Kim uses the concept of curative violence to question the representation of cure as a universal good and to understand how nonmedical and medical cures come with violent effects that are not only symbolic but also physical. Writing disability theory in a transnational context, Kim tracks the shifts from the 1930s to the present in the ways that disabled bodies and narratives of cure have been represented in Korean folktales, novels, visual culture, media accounts, policies, and activism. Whether analyzing eugenics, the management of Hansen's disease, discourses on disabled people's sexuality, violence against disabled women, or rethinking the use of disabled people as

a metaphor for life under Japanese colonial rule or under the U.S. military occupation, Kim shows how the possibility of life with disability that is free from violence depends on the creation of a space and time where cure is seen as a negotiation rather than a necessity.

Functional Analysis in Clinical Treatment Jun 16 2021 With the ongoing pressures for psychologists to practice evidence-based care, and the requirement insurance carriers have both for treatment goals, measurement of outcomes, and a focus on brief therapy, functional analysis provides a framework for achieving all of the above. Having proven itself in treating behavioral problems in education, functional analysis is now being applied more broadly to behavioral and psychological disorders. In his 1996 book (*Functional Analysis in Clinical Psychology*, Wiley UK), Sturme applied the functional behavioral approach to case formulation across a wide range of psychological disorders and behaviors. Since the publication of his book, no other volume has taken an explicit behavioral approach to case formulation. The changes that have occurred over the last 10 years in behavioral case formulation have been significant and substantial. They include (a) a large expansion of the range of problems addressed, such as ADHD, (b) a range of new verbal behavior therapies such as Acceptance and Commitment Therapies, (c) increased area of activity in the area of autism spectrum disorders; (d) many publications in how to train professionals, staff and parents in behavioral technology, and (e) new assessment instruments and procedures. Makes theories of functional analysis accessible to a wide range of mental health professionals Reviews behavioral assessment methods and strategies for case formulation Offers readers a practical, organized, data-based means of understanding psychiatric conditions for intervening effectively and measuring positive change
