[Accounting for Value](#) Sep 10 2020 Accounting for Value teaches investors and analysts how to handle accounting in evaluating equity investments. The book's novel approach shows that valuation and accounting are much the same: valuation is actually a matter of accounting for value. Laying aside many of the tools of modern finance the cost-of-capital, the CAPM, and discounted cash flow analysis Stephen Penman returns to the common-sense principles that have long guided fundamental investing: price is what you pay but value is what you get; the risk in investing is the risk of paying too much; anchor on what you know rather than speculation; and beware of paying too much for speculative growth. Penman puts these ideas in touch with the quantification supplied by accounting, producing practical tools for the intelligent investor. Accounting for value provides protection from paying too much for a stock and clues the investor in to the likely return from buying growth. Strikingly, the analysis finesses the need to calculate a "cost-of-capital," which often frustrates the application of modern valuation techniques. Accounting for value recasts "value" versus "growth" investing and explains such curiosities as why earnings-to-price and book-to-price ratios predict stock returns. By the end of the book, Penman has the intelligent investor thinking like an intelligent accountant, better equipped to handle the bubbles and crashes of our time. For accounting regulators, Penman also prescribes a formula for intelligent accounting reform, engaging with such controversial issues as fair value accounting.

Approaches and Theories to standard setting in Accounting Jan 15 2021 Essay from the year 2011 in the subject Business economics - Accounting and Taxes, grade: 64, University of Westminster (Westminster Business School), course: Financial Accounting and Policy, language: English, abstract: Since the financial crisis in 2008 the topic regulation of the markets at all revived. The world was looking for guilty parties in Rating agencies, financial institutions, governments and lastly audit firms and institutions which gave them their working framework the accounting standards. On the one hand the scream for more regulation in the private sector to protect the public good became louder and on the other hand scientists were warning of such overbearing steps because they would be damaging the economy. This issue provides the basis for this paper where accounting is seen as an economic good. Accounting information is not costless to produce for the corporations and it raises compliance costs. On the one hand managers are using accounting rules that minimize information costs and on the other hand shareholders want accounting rules that improve their ability to control and monitor the manager's action. Theoretically, financial accounting and reporting should be objective, neutral and apolitical. However, the standard setting process can be influenced by external groups with different interests.
